

Mayank

India

I am a professional full-stack developer. Currently, I am working as a software engineer at Radixweb. I have 4 years of experience in the IT sector. Currently, I am working on a project that is used in the printing industry. I have a variety of technical skills in PHP (web development), REST API, Linux, object-oriented concepts, MVC framework, server architecture, and sub-version control tools.

Technical Skills

This developer passed 5+ hours of rigorous vetting for the following skills:

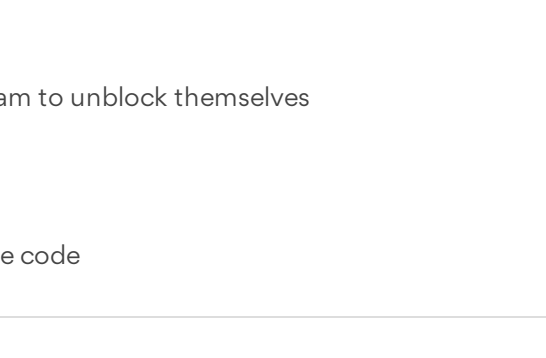

HTML	★★★★★	4 years
MySQL	★★★★★	3 years
CSS	★★★★★	4 years
JavaScript	★★★★★	4 years
Javascript ES6	★★★★★	4 years
Docker	★★★★★	1 year
HTML5	★★★★★	5 years
PHP	★★★★★	4 years

Additional skills:

Android 1 year	Kotlin 1 year	Software Development 1 year	C++ 2 years	Python 1 year
C 2 years	Digital Marketing 2 years	Web Design 4 years	Laravel 1 year	
GitHub 2 years	Bootstrap 4 years	Git 4 years	jQuery 4 years	Microsoft Office 1 year
GitLab 2 years	REST/RESTful APIs 2 years	API Design 2 years		
Computer Science Fundamentals 4 years	Linux 3 years	Third party APIs 4 years		
Java 1 year				

Soft Skills

Here is a breakdown of the developer's vetted soft skills:

- Project Impact**
Can own tasks
- Engineering Excellence**
Has good coding/debugging/testing skills
- Communication**
Can effectively collaborate with many different people in the team: designer, QA, PM
- People**
Can work with other people in the team to unblock themselves
- Direction**
Can make suggestions to improve the code

Work History

Software engineer

Radixweb

October 2021 - Present
10 mos

reachingneighbors
https://reachingneighbors.onprintshop.com/

- I learned a lot of new things while working on this project, such as how to use advanced JavaScript and how to integrate Zoho Book, ZOHO CRM among other things.
- I used a variety of technologies and tools in this project, including PHP, bootstrap, CSS, JavaScript, Docker, GitLab, CI/CD pipeline, QA, Deployment, and some third-party libraries.
- The big challenge in this project is uploading a big CSV file with millions of records and requiring read and write operations. There are some challenges during integrating Zoho Book and Zoho CRM, such as data not synchronizing properly.

m2printing

https://shop.m2printing.nl/

- This is another project based onprintshop framework (https://www.onprintshop.com/) which is based on php technology and other frontend technology like bootstrap4, CSS, JavaScript, advanced library etc.
- Tools are used such docker, svn.
- It is my responsibility to customize the site as per client requirements.

- I worked with a team of 3 software engineers, and we directly reported to the project lead on a daily and weekly basis. I also worked closely with the Tech Lead, UX team, and QA team to strategize product design, implementation, and testing.

- In this project, I need to integrate the client's shop into Google Maps and show a customer Google Map on the website.
- Search by shop name, search by pin code, change map icon, and so on.
- The site can't be open without the branch being selected. That means the user comes from another site to the site with the branch id. If a branch is available on our site then the site is accessible; otherwise, it will go back.
- During developed the site we have to create one staging site in docker as require environment like php version, to testing install the ssl etc.
- I used a variety of technologies and tools in this project, including PHP, bootstrap, CSS, JavaScript, Docker, GitLab, CI/CD pipeline, QA, Deployment, and some third-party libraries.
- PHP was used to implement high-quality code backend, bootstrap4, JavaScript, jQuery and other third party library are used for frontend design while SQL was used as the database, on the system's back end.
- Customizing the Google Map is a significant difficulty for me.
- I did some research and read through the Google Maps documentation on the internet.
